

**MONOCLONAL ANTIBODY TO
MOUSE GAMMA INTERFERON (IFN- γ)
Clone F1**

Catalog nr	HM1003b (lot number and expiry date are indicated on the label)										
Description	Monoclonal antibody F1 binds both natural and recombinant mouse gamma Interferon. Its binding activity has been demonstrated in vitro and in vivo. F1 antibodies have been demonstrated to be able to inhibit inflammatory responses to bacterial lipopolysaccharides. These antibodies were furthermore shown to inhibit Shwartzman reactions and to protect NZB mice against spontaneous development of autoimmune disease. The neutralizing activity of the antibody has been demonstrated as being poor in anti-viral assays. If a neutralizing antibody is specifically desired, we recommend the use of another antibody available from Hbt, namely F3 (prod. code HM1005) which recognizes a different epitope on the murine gamma Interferon molecule and in contrast to F1, exhibits strong neutralizing activity. The antibody does not react with rat or human gamma interferon										
Species	Rat IgG _{2a}										
Formulation	Lyophilized product in PBS, containing 500 μ g. Reconstitute the vial by injection of 0.5 ml sterile distilled or de-ionized water (Caution: vial is under vacuum).										
Application	The antibody can be used for the purification or immunochemical investigation of mouse gamma Interferon and structural studies. Furthermore the antibody is useful for immunoprecipitation and as a tracer antibody in immuno assay procedures.										
Storage and stability	Lyophilized product should be stored at 4°C. Store stock solution in aliquots at -20°C. Repeated freeze and thaw cycles will cause loss of activity. Under recommended storage conditions, product is stable for one year.										
Precautions	For research use only. Not for use in or on humans or animals or for diagnostics. It is the responsibility of the user to comply with all local/state and Federal rules in the use of this product. Hbt is not responsible for any patent infringements that might result with the use of or derivation of this product.
